ABSTRACT

Trippy.com (travel agency system) is a system that designed to help traveller to find suitable package for their trip. All of the package comes from travel agency company who want to gain profit. Basicly, travel agency engaged in selling and arranging transportation, accommodations, tours and trips for travel. The trippy.com has been developed to override or solve the problems prevailing in the practicing manual system. Every travel agency organization, whether big or small has challenges to overcome and managing the information of customer, payment, booking detail and charges. This problem derived from manual system where the travel agency company need to collect the information in manual way such as like telephone call to customer or from text messaging. The objective of the system is to increase efficiency and improve services provided to the customers through better application of technology in daily operations. Next, to organize customer information in the system in systematic order. Hence this system helps the travel agency company to store every details of customer information and package records in an effective way because the transaction is done online and the organization just need to monitor from that system. The target user for this system is travel agency organization and traveller. This system will help both parties and will improve their business routine and accurate decision making.
