ABSTRACT

Event System Management (ESM) is a system that provides information of the event that will be held in the UiTM to all UiTM students for them to get the details of information about the event quickly and accurately. Through this system it will be provide the information of activities or event to students such as date, time, venue, title of the programmed and information. Other than that, by creating this system, students can become more aware for the upcoming events and activities in the UiTM. Therefore, the main problem that make researcher want to create this system because students nowadays are too lazy and didn't aware about the incoming messages about the event through the whatSapp group. In this case, students also might ignore about the message of that event. So, by this system it becomes more convenience to the students for them to read or get the information about the event. Hence, researcher thinks that this system is important because it can evade students from not knowing about the activity that will be held. For this system, student just only need to register and all the information about the event will be provided through that account. Lastly, researcher hope that this system will be continued and succeed to produce.
