ABSTRACT

The system that researcher wants to develop is a system regarding the resale of the item that had been used. By using this system, user can reserved any item that they desire and they also can see several of items and not just only a single item within one interface. The problem is that nowadays, about the sale of the used item, there not many systems that willing to support this process. Even if there is one, it still regarded as ineffective system. For example are students. Students find it hard to purchase for the note that lecturers ask them to buy. They must ask their seniors and confront them in order for them to get the notes. This process is annoying since that if they want to purchase for another notes, and that seniors do not have the notes with them, they must find another seniors that bear the notes. When the user log in to this system, they may see all materials that had been used by the former user and that including the notes. All notes may be identified within this system no matter on whatever subject. The reason why this matter need to be solved was because people especially students only able to get their notes after 4 to 5 weeks after start of semester and this is not good for their educational environment. So by using this system, user can just log in to system and they can immediately searching for all kinds of educational material or references after they enter their new semester. The researcher think this solution is good since that it will solve the issue of students cannot catch up the content of the study that had been taught by the lecturers due their lacking of notes with them. They always make excuse of not being able to understand what the instructor teaches them in front because they do not have any notes to refer to. So, by utilizing this system, that kind of excuse shall be no more emerging. By using the system, people can make their items that they do not want to possess anymore into becoming a well-functioned item once again by commercializing the specific item into this system

Keywords: Resale, Items, Subject, Notes.
