ABSTRACT

Personal teacher system is a one system that is student or parent can find the personal teacher only in the system and can choose the categories, state and also choose the professional teacher. Nowadays, many advertisements about personal teacher had been promoted in everywhere but student and parent not care about the information. After make a research and my observation, I can identify several problems that make me to create this system. First of all, it's hard to find the teachers which fulfill the attention to one student or in small group, for example 2-3 person in group. Secondly, parent or student don't need to wasting their time to through the traffic jam to go to study place or tuition their children and parent don't need to rushing from work place to home to take their children to the study place or tuition. When have this system, parent don't need to rushing and wasting their time for sending their children to tuition because parent just need to search any teacher that their want and the teacher will go to home or place that are required based on designated time. Parent or student also can make the payment by using online payment. Besides that, user also can give the rating to teacher after teaching. So, this system can help parent or student to choose the best and professional teacher.

Keywords: Teacher, Student, Parent, Professional Teacher
