ABSTRACT

The system that the researcher wants to develop is the system that would significantly help people in purchasing for the electronic products. By using the system, user can see a lot of electronic equipment being available such as the computers, laptops, speakers, television and other electronic equipment. The problem that was identified was that nowadays we know that people are very busy with their working schedule and their life. They just do not have much time to spend just to go to the shopping mall and purchasing for the electronic items that they want. If they tend to go, they will waste a lot of their golden time on the traffic jam. So by having the likes of this system, the user can just use the system and see all kinds of items that they wish to have. They do not even have to move from their workplace to choose the electronic items that they want. Then, The problem need to be solved because people always want to make the best choice when choosing an electronic items and they also want use all of their time efficiently without wasting any time. The solution is better since that people do not have to waste their time on the traffic jam anymore and they can effectively managing their working time. The system may be a medium in commercializing a lot of electronic items that people may be unfamiliar with. So by going to this system, a lot of electronic items can become more well known among the community.

Keywords: electronic, traffic jam, shopping mall
