ABSTRACT

Nowadays, the use of systems has become essential in most of organization as well as institution in order to help them with the management of their information to become more accurate, effective and up to date. The name of the project that will be create and develop is known as e-Pintar system which is dedicated for the staffs at Taska. This is to help them to have the better and effective system to be used in order to handle all the information and data that need to be recorded compared to the current manual application method that being used which is the paper-based method. This problem is important to be solving because it will help them to avoid from losing the important records of children information or organization information since the system provided will help them in keeping all of the records securely without have to worry of any losses. This system also will help the management of the information and the data getting more efficient and accurate. This problem will be solve by the project will provide an effective easy database, input forms and report in order to automate all the information produced whenever a staffs at Taska filling and update the information regarding the children activities. This solution is better because it can make all the information regarding the children details can be more systematically arranged and being more secured and protected against any problem. It is also to help minimize the amount of time used or required by the staffs in order to fill in the form of paper in order to record the children's information. Furthermore, the product can be commercialized as an Apps.
